

This Tuesday, President Biden delivered a State of the Union Address that touched on a number of health law and policy topics, including the need for improved access to mental health care services, and the need for limits on personal data collection by Big Tech. An upcoming Petrie-Flom Center event will interweave these two issues, looking at the promise of digital technologies in promoting access to mental health care, but also addressing potential harms of these data-driven approaches. We hope you will join us for this event, [Artificial Intelligence In Mental Health: Strategies for Avoiding Potential Data Harms](#), which will be held as a Zoom webinar on March 22nd at 4 pm ET.

In the coming weeks, we're also hosting an event on [telehealth](#). Join us on February 23rd at 12 pm ET for [Achieving Telehealth's Potential: The Policy Landscape's Impact on Specialty Care](#). Law, policy, and medical experts will gather to discuss the impact of our current physician licensure framework on the delivery of specialty care. This is the first event of a three-part series that will explore the challenges of developing interstate telehealth practices, particularly for in-demand specialties. See all of our [upcoming events](#) on our website, and catch up on past events via our [YouTube channel](#).

Spotlight on Scholarship

The End of Public Health? An Introduction to the Symposium

Certain aspects of public health law as we know it are dead. In this symposium, we propose a path forward to create a “new public health” from the ashes.
